

PADSTONES

APPLICATION

Padstones are generally specified by engineers and architects to help spread heavy point loads across the block or brick walls.

COMPRESSIVE STRENGTH

Stressline padstones are manufactured in a variety of sections and lengths with a standard concrete strength of 50 N/mm². Other concrete strengths can be achieved on application. All rectangular padstones may be used in any orientation.

FINISHES

Stressline padstones are made from wet cast concrete in steel pan moulds providing a smooth finish.

Length (mm)	Height (mm)	Width (mm)	Weight (kg)
300	140	102	10
215	140	215	16
215	215	102	11
